

Gynatrof®

(Hyaluronic Acid and Vitamin E)

Natural Vaginal Moisturizer

Immediate relief of dryness, itching, burning & painful sexual activity, associated with Vaginal Atrophy

Description

Gynatrof gel is designed to relieve the symptoms of vaginal atrophy such as dryness, burning, itching and painful sexual activity, by enhancing the body's natural moisture.

General Information

Symptoms of vaginal atrophy are common in women during their pre and postmenopausal years and are largely due to the decline in the level of the female hormone, estrogen.

As estrogen levels decrease, the vaginal walls become atrophic, dry and can cause vaginal discomfort.

Vaginal atrophy can lead to the following symptoms:

- Painful sexual activity
- Dryness
- Burning
- Itching
- Bleeding
- Recurrent urinary tract infections

Indication

Gynatrof is designed to relieve the symptoms of vaginal atrophy and prevent the vaginal discomfort that can occur at any stage in a woman's life. The lack of estrogen can lead to alterations in the vagina and can occur in the following situations:

- During or after menopause
- After childbirth
- While breast feeding
- When using hormone preparations (oral contraceptives)
- During chemotherapy

Gynatrof protects the skin, tissue, improves lubrication, enhances regeneration, and represents a safe alternative to hormone therapy.

Composition

Gynatrof is formulated using a patented liposomal technology that supplies long lasting moisture to the dry vaginal mucosa. The active complex of Gynatrof contains liposomes and hyaluronic acid.

Liposomes are microscopic beads, formulated as a moisturizer and lubricant. Liposomes ensure that the vagina remains moist, increase elasticity and provide vaginal hydration.

Hyaluronic acid is able to store extremely large quantities of water, forms a natural moisturizing liquid film, is responsible for the moisture and elasticity of the vaginal skin and has the following important properties:

Protection: Protects the vaginal skin, reduces irritation and prevents itching and burning.

Lubrication: Enhances natural lubrication and allows for normal sexual activity.

Regeneration: Forms a liquid film to cover damaged skin in the vagina and promotes healing.

Other ingredients of Gynatrof provide lubrication to the vagina and calm symptoms such as itching and irritation.

All Ingredients: Purified water, Hyaluronic Acid, Tocopherol Acetate (vitamin E), Denatured Ethanol, Soya Lecithin E322, Carbomer, Sodium methyl-4-hydroxybenzoate (E219), Cholesterol, Imidazolidinylurea, Sodium Edetate, Hop Extract (Humulus lupulus), Propylene Glycol, Sodium propyl-4-hydroxybenzoate (E217).

Mechanism of Action & Uses

Gynatrof is formulated using a patented liposomal technology that supplies long-lasting moisture to the dry vaginal mucosa. The natural extracts from the hops plant together with the Vitamin E help prevent the aging of the vaginal area by enhancing the body's own natural moisture and maintaining vaginal tone and firmness.

This innovative liposomal formulation improves the natural moistness of the vagina and supports the regeneration of the vaginal mucous membrane (during estrogen deficiency). Gynatrof maintains tension and moistness in the perivaginal and vaginal tissue and can be used to facilitate sexual activity.

Contraindications

Individual hypersensitivity to any of the ingredients.

Instructions for Use

Gynatrof is applied into the vagina and to the surrounding perivaginal area to relieve symptoms of vaginal atrophy.

Gynatrof is inserted into the vagina using the enclosed applicator, which is filled with 2.5 mL of vaginal gel (see "Notes on Use").

Initial therapy: The vaginal gel is administered once daily, for 7 consecutive days (preferably at bedtime).

Maintenance therapy: Administer the vaginal gel 2 times weekly every 3 days.

Gynatrof can also be applied to the perivaginal area (the vaginal opening and external area) using fingertip. Perivaginal application can help to ease sexual activity and alleviate vulvar dryness. Apply gel as needed, for as long as you desire and to maintain a lasting effect.

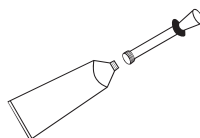

Warning:

- The device (gel and applicator) is intended for individual use and must not be shared.
- Keep out of reach of children.

Notes on Use

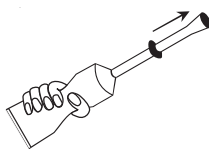

Using the applicator is similar to inserting a tampon.

A:

Pierce tube with end cap and screw the applicator onto the opening of the tube.

B:

Pull the piston and fill up the applicator until the stop position (approximately half of the capacity) by pressing the tube, to obtain one dose of Gynatrof vaginal gel.

C:

Unscrew the applicator from the tube, find a comfortable position and insert the applicator into the vagina. Gently push the piston and empty the complete dose of gel into the vagina.

It is advisable to apply a thin layer of the gel on the applicator's edge to facilitate insertion into the vagina.

After use, clean the applicator thoroughly as follows:

- To dismantle the applicator, press the white round tip of the piston down against any hard surface until it clicks to release.
- Remove the piston from the cylinder and wash with lukewarm water: rub with fingers to remove any excess gel, fill and drain the cylinder repeatedly with water. Shake the cylinder to remove excess water and dry with a clean towel.
- **Store the dismantled applicator in the original carton box until next use.** To reassemble the applicator, insert the thin end of the piston into the wider threaded end of the cylinder and with light pressure, click the piston back into place.

Gynatrof vaginal gel is compatible with latex and polyisoprene condoms, but not with polyurathane condoms.

Storage Instructions

Store Gynatrof vaginal gel in a dry place at room temperature, 15°C to 30°C.
